

Art Rosnovsky

Full Stack Engineer

job@rosnovsky.us | (360) 513-6735 | github.com/rosnovsky | Arlington, WA | Remote preferred

Full-Stack Typescript Engineer specializing in CIAM (Auth0 expert), delivering robust solutions for multi-million user enterprises and startups. Proven in driving efficiency via custom tooling (e.g., 30% workflow improvement, \$20K AWS savings) and leading projects from ambiguous requirements to MVP by rapidly mastering new technologies.

Technical Skills

- **Core Proficiencies:** TypeScript , React , Node.js , Auth0 Ecosystem (Actions, Forms, Flows, APIs)
- **Front-End Development:** Next.js , JavaScript (ES6+), HTML5 , CSS3 , Vite , Tailwind CSS , React Query , AEM
- **Back-End Development:** Next.js , Express.js , Hono , Python (Django) , C# (.NET Core) , Serverless Stack
- **Databases & Data Pipelines:** PostgreSQL , MongoDB , MySQL , SQLite , Redis , Snowflake , Airflow
- **Cloud Platforms & DevOps:** AWS (EKS, EC2, SQS, Lambda, etc.), Azure , GCP , Digital Ocean , Vercel , Netlify , Docker , Kubernetes , Git , CI/CD

Work Experience

Senior Auth0 Developer

[BeyondID](#) Remote • Apr 2024 - Jan 2025

- Led CIAM architecture and engineering for globally recognized brands with user bases scaling to hundreds of millions, migrating them from legacy authentication systems or DIY to modern platforms.
- Implemented advanced Auth0 customizations (Actions, Rules, Hooks) to solve intricate authentication challenges, including a full-scale migration of a multi-application, omni-channel, high-volume legacy system.
- Developed a suite of Typescript-based internal tools, including POC scaffolding utilities, automated Auth0 tenant configurators, and custom user migration scripts, reducing project setup and data migration times by an estimated 30%.

Software Engineer

[Auth0](#) Remote • Mar 2021 - April 2024

- Contributed to '[Quarterly Snapshot](#),' a self-service analytics feature, by developing React UI components and supporting Node.js services; enabled enterprise customers to track usage (MAU, M2M tokens) and security metrics (blocked bot attempts, etc.) via new data pipelines (dbt, Airflow, Snowflake, SQS)
- Engineered an AI-powered Slack bot for internal Customer First teams, leveraging NLP (Hugging Face) and custom search/summarization to query diverse knowledge bases (Confluence, Docs, Slack, etc.), saving an estimated 5 hours/week per employee.
- Achieved an estimated \$20K in annual AWS cost savings by optimizing EKS and EC2 resource utilization for an internal AI application through instance rightsizing and code refactoring.
- Developed `onboarding.auth0.com` using Next.js to automate enterprise customer onboarding, improving product adoption and utilization.

Developer Support Engineer

[Auth0](#), Remote • Dec 2019 - Mar 2021

- Served as a primary technical expert for Auth0 customers, resolving 2,000+ support cases related to API integration, extensibility, and tenant configuration for high-profile enterprises (leaders in media, finance, tech, and AI) and startups, specializing in modern SPA (Next.js, Svelte) implementations.
- Provided critical on-call support for customer product launches, identified and escalated core platform bugs to engineering, and onboarded/mentored new Developer Support Engineers in authentication/authorization principles and Auth0 best practices.

Software Engineer

[Microsoft](#), Redmond, WA • Apr 2019 - Oct 2019

- Owned the end-to-end development of an internal customer data search application for Microsoft's Customer Success team, rapidly mastering C#.NET Core to build a full-stack solution (React, MSSQL, Azure Pipelines) that unified disparate data sources, enabling targeted customer segmentation and outreach (e.g., for specific marketing campaigns or feature adoption initiatives).

Software Engineer

[Transmark Logistics](#), Kent, WA • Oct 2018 — Mar 2019

- Led the development of an MVP for an internal shipment and task management system, from ambiguous requirements to a deployed Python/Django application designed to replace an opaque legacy system.
- Made all technical decisions, architecting the solution (MySQL, RabbitMQ, Docker, WebSockets for real-time UI) on Digital Ocean and establishing CI/CD pipelines (Bitbucket), ensuring the system was maintainable by the client's team.

Web Developer

[AT&T](#), Bothell, WA • Apr 2017 - Sep 2018

- Ensured content accuracy and UI functionality for the high-traffic AT&T MyServices portal (serving millions of customers) by rectifying hundreds of defects and implementing 100+ updates using Adobe Experience Manager (AEM), HTML, and CSS.

Education

- AA, Multimedia Design from [Fanshawe College of Applied Art and Technology](#) (London, Canada)
- BA, Journalism from [RUDN University](#) (Moscow, Russia)
- Data Foundations from [Udacity Nanodegree](#) (Remote)

Open Source / Hobbie Projects

- [rosnovsky/astro-mastodon](#) - A simple Astro component for displaying Mastodon posts.
- [Plex Music Stats] - show your Plex music stats. | typescript , react , remix , tailwind
- [SafeSafe] - a private app to store your important documents, with AI-powered OCR, transcripts, reminders, and vector search.

Languages

- English — Fluent
- Russian — Fluent (comprehend Ukrainian 🇺🇦, Belarusian)
